

Ohio Odonata Society Species List by County - Records to 2011

Ohio Odonata Species List by County

Compiled Sunday, December 23rd 2012 from data as of December, **2011**. There are 28,359 records included. Records with unknown counties or question marks in the county field were excluded or grouped at the end of the report. Records listing two or more counties resolved to the first county listed. Records from historical publications, museum and other collections, and photographic records were all included.

The Ohio Odonata Society was supported by a grant from the [Ohio Department of Natural Resources'](#) Division of [Wildlife](#). These pages do not represent official publications of any of these agencies.

Researchers should be aware that at any given time, the database used to produce this list is at least several hundred records behind the main database of the Ohio Odonata Society. Published records for which voucher specimens could not be located for verification are included on the maps. Those needing more up-to-date information for research purposes, or those planning to publish any reference to these distributions, should contact [Bob Glotzhober](#) to assure accuracy, avoid any computer-program generated errors, and coordinate potential simultaneously published accounts.

Comments about this list should be addressed to [Dave McShaffrey](#).
