ICHNEUMONIDAE																													
Therion morio														-----					-----				-----						
Pseudamblytetes succinctus					-----																-----								
PELECIDAE																													
Pelecinus polyturator														-----					-----				-----						
CHRYSIDAE																													
Chrysis spp.			-----				-----				-----																		
TIPHIIDAE																													
Myzinum quinquecinctum														-----															
Myzinum obscurum														-----									-----						
SCOLIIDAE																													
Scolia bicincta														-----															
Scolia nobilitata															-----														
Scolia dubia																-----													
Campsomeris pilipes														-----															
MUTILLIDAE																													
Timulla vagans														-----															
Dasymutilla spp.																						-----							
POMPILIDAE																													
Anoplius spp.										-----					-----						-----								
Prionemoides unifasciatus											-----											-----							
EUMENINAE																													
Pseudodynerus quadrisectus																													
Monobia quadridens															-----														
Euodynerus spp.																													
Stenodynerus vagans																													-----
Eumenes verticalis							-----																						
Eumenes fraternis																													-----
Ancistrocerus catskill																													
VESPINAE																													
Vespula consobrina																													
Vespula arenaria						-----																							
Vespula maculifrons																													
Vespula vidua																							-----						-----
Dolichovespula maculata					-----				-----																				
POLISTINAE																													
Polistes fuscatus																													
Polistes metricus																													
SPHECIDAE																													
Prionyx parkeri																													
Tachytes crassus																													
Trypoxolon politum																													
Sceliphron cementarium																													
Sphex pennsylvanicus																													
Sphex ichneumoneus																													
Ammophila aureonotata																													
Chalybion californicum																													
Bembix spinolae																													
Philanthus gibbosus																													
Bicyrtes quadrifasciatus																													
Cerceris spp.																													
Ectemnius spp.																													
COLLETIDAE																													
Hylaeus spp.																													
Colletes spp.																													
ANDRENIDAE																													
Andrena crataegi																													
HALICTIDAE																													
Augochlora pura																													
Agapostemon spp.																													
MEGACHILIDAE																													
Megachile campanulae																													
Megachile latimanus																													
Megachile spp.																													
Coelioxys sayi																													
ANTHOPHORIDAE																													
Ceratina spp.																													
Xylocopa virginica																													

Dashes indicate weeks in which the insect was seen. When the gap between observations was only one week, the gap was dashed in. When the gap was two weeks or more, it was left standing.
